

Revisiting the Picturesque: The Preschool Building as garden

Utdrag ur examensarbete

I mitt examensarbete undersökte jag vilka rumsliga kvaliteter som fanns i 1700-talets landskapsträdgårdar, och hur dessa kan användas för att utforma en förskola. Mitt arbete bestod av en litteraturstudie, en undersökning av arkitekturens verktyg, och till sist ett designprojekt — en del av designprojektet redovisas i detta utdrag.

Composition

The diagram shows how the final composition has been developed with *interlocking spaces*.

Dashed images show views with *partially concealed*, *delayed view* or *oblique movement*.

Volume

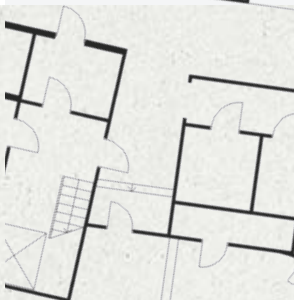

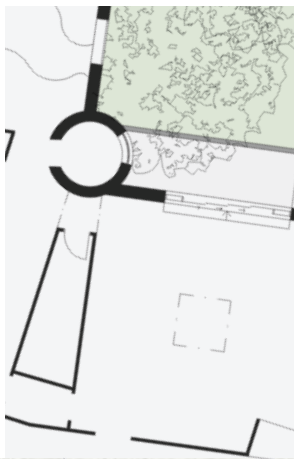

Roofs with different shapes added.

Roofs of different shapes are added to suit the character and use of internal rooms. Here there is a balancing act to have in mind—to find character and variety, without creating disorder.

Rooms with varying heights

The height of the space can be configured to suit the character and use of the room. The experience of moving between spaces can be strengthened by a considered change of height of rooms, using similarity and contrast.

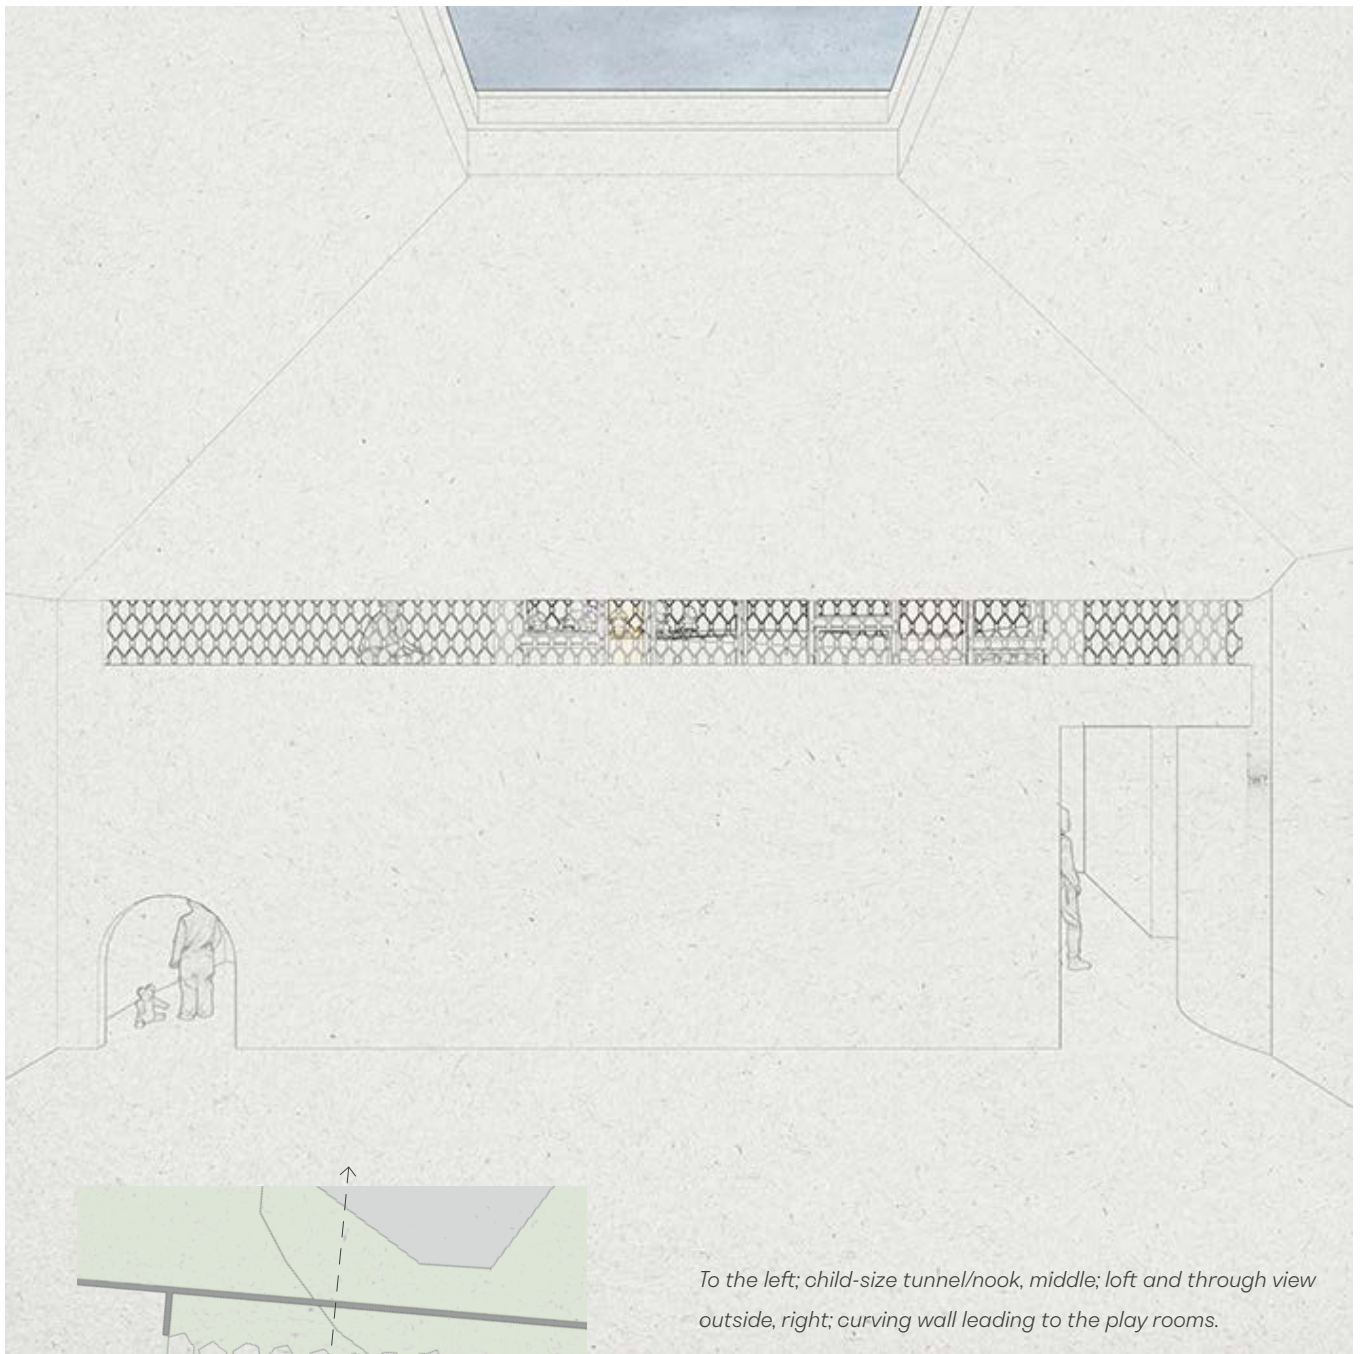

Introduction, displaying multiple possibilities; gathering room, entrance to yard, mountain, the other unit of the preschool.

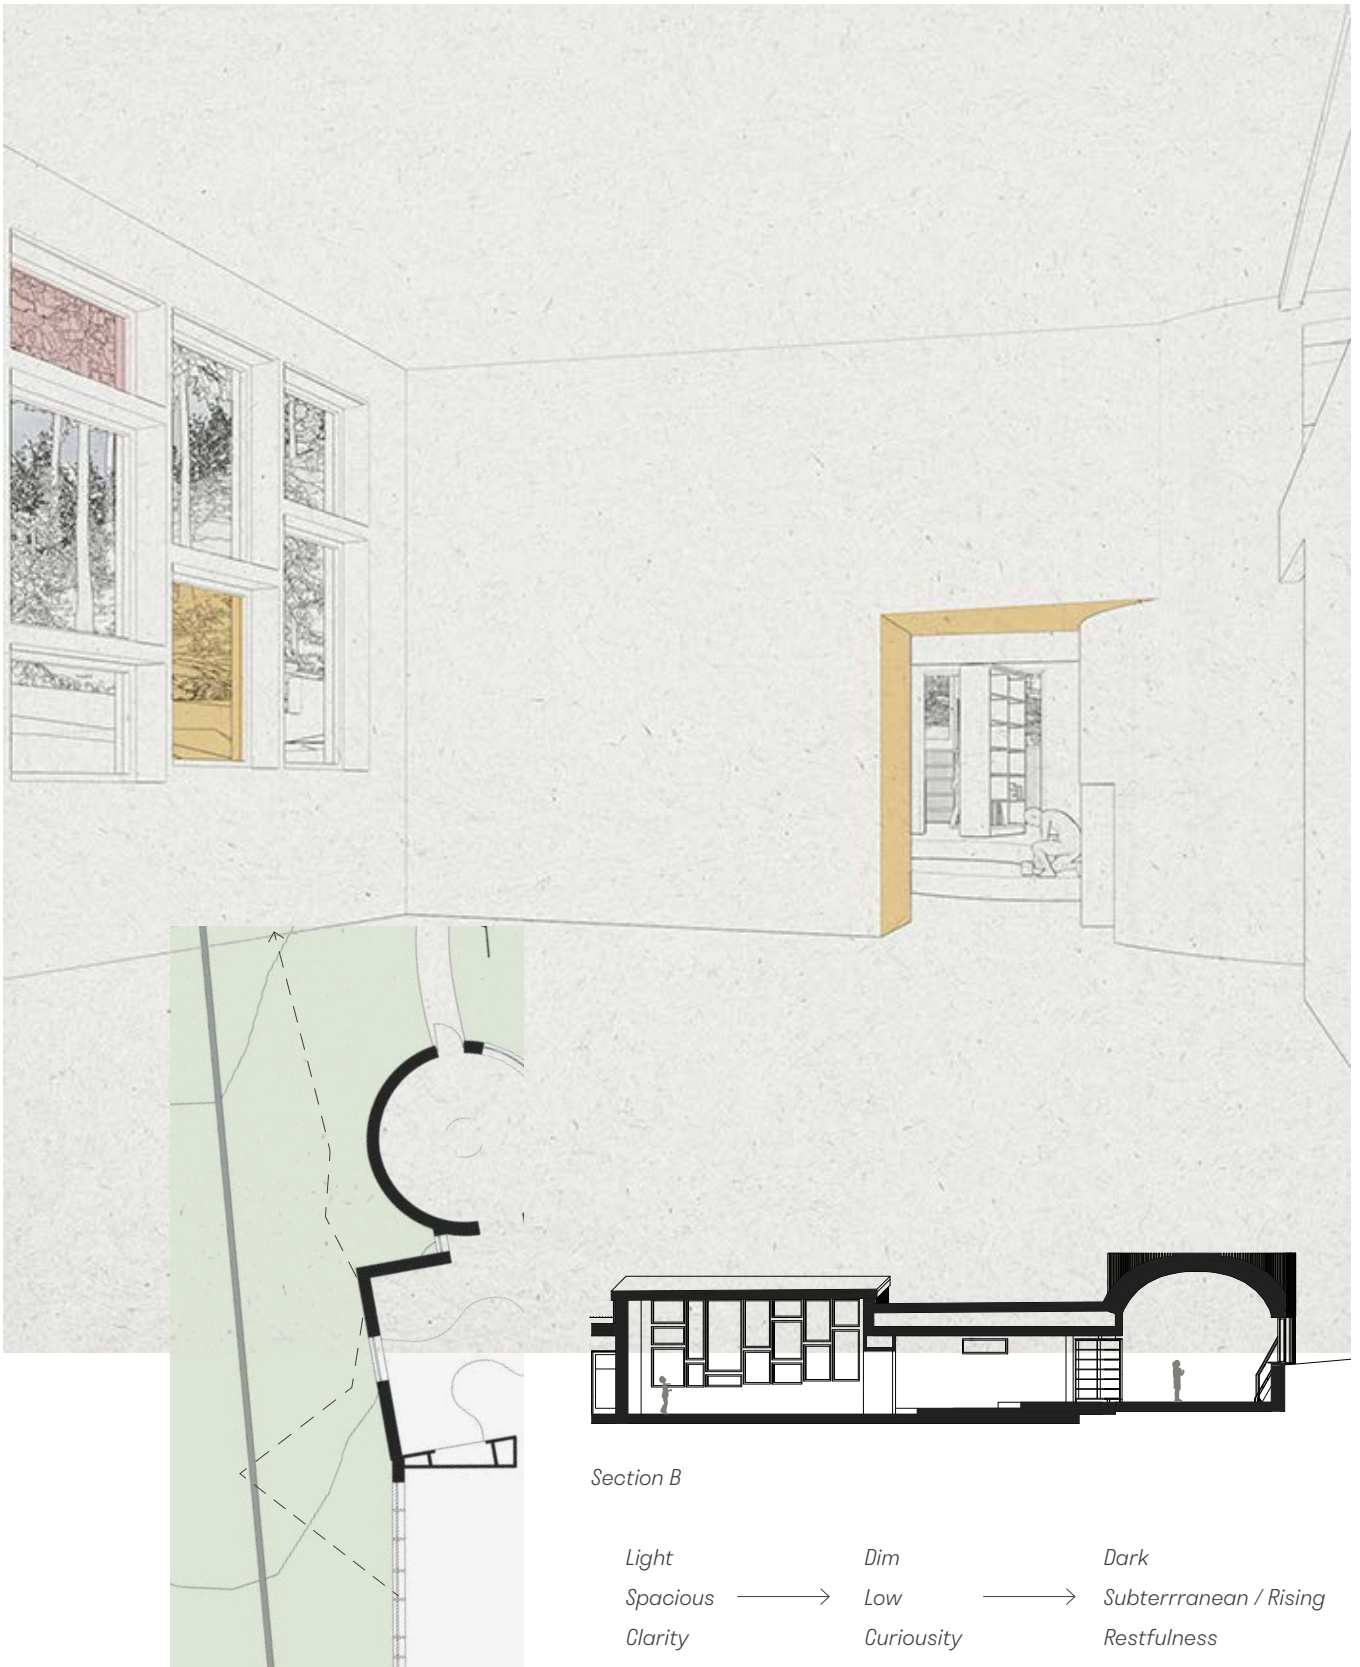

Foyer a

Section A

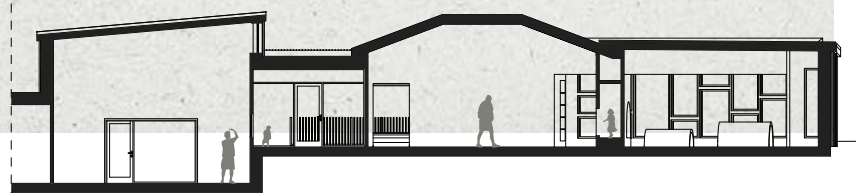

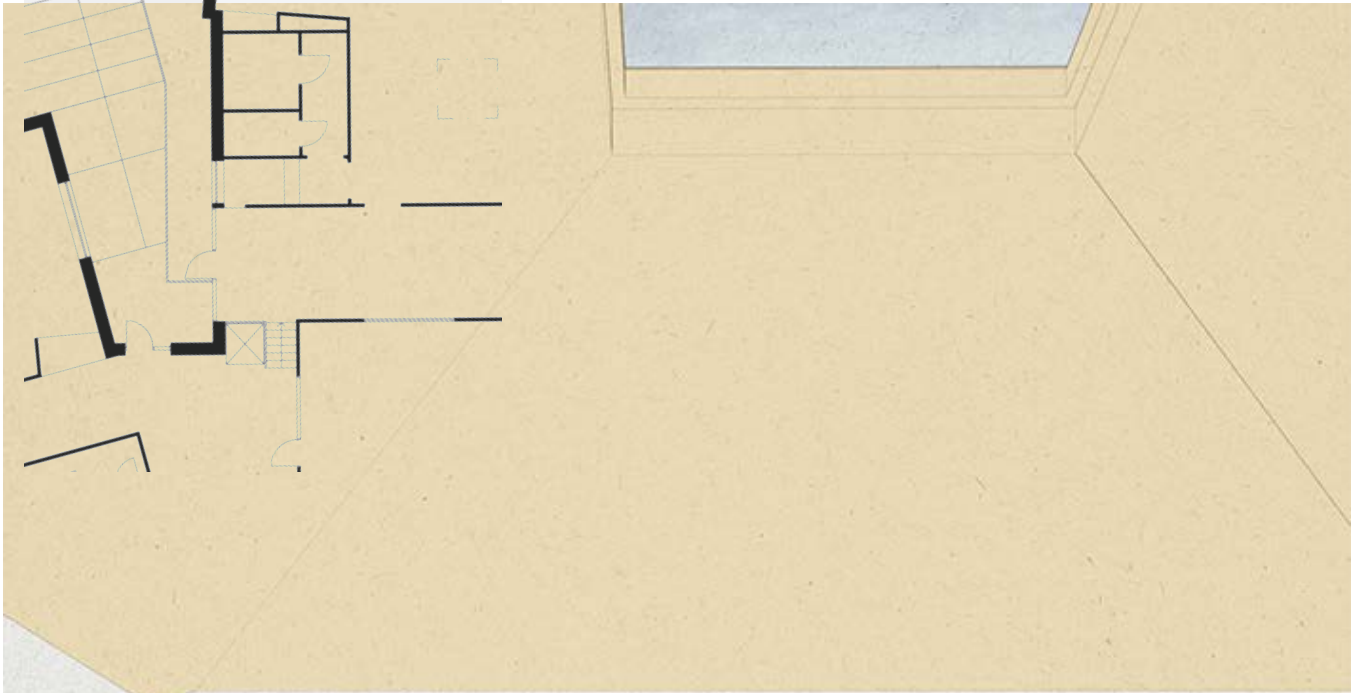

Gathering Room a

Sequence of spaces; the eye is delayed by the coloured windows, the passage-niche is marked to draw the eye, it travels over the levels on the floor, is stopped or moves past the hidden door/bookcase.

The gathering rooms and play rooms inside this unit have a semi-open connection. In the intersection between the rooms is a raised tunnel with overlapping arched openings, allowing a duality of opening and closing, and a changeful through-view.

Section C

Gathering Room b
